TOK601E & TOK721

TOK601E fabrics demonstrate good hook-and-loop fastening properties and are more stretchable than ordinary TOK fabrics. They are suitable for general or disposable protective pads used in medical care and sports protection, or accessory parts of diving suits and surfing suits.

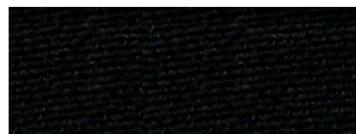

TOK721 fabrics have specially structured loops on the surface. The gloss and fastening properties are superior to be applicable in general protective pads for medical care and sports protection and in accessory parts of diving suits and surfing suits.
